

STANLEY® National Survey Finds that Nearly Half of Residential Trade Pros Would Rather Go Without their Phone, Wallet or Keys than their Tape Measure

- In honor of National Tape Measure Day on July 14, STANLEY released the results of a survey measuring the habits of residential trade professionals when it comes to their tape measures
- The survey found that 75% of residential trade professionals reach for their tape measure more than five times per day with more than three-quarters feeling incomplete without their tape measures
- STANLEY manufactures nearly 30 million tapes annually and has processed enough steel to circle the world multiple times
- To celebrate National Tape Measure Day, STANLEY is giving away some of your favorite tape measures. To enter for a chance to win, comment your favorite tape measure on STANLEY Instagram and use #STANLEYTapeGiveaway

TOWSON, Md., July 10, 2024 [PRNewswire/](#) -- A new national survey from STANLEY®, a Stanley Black & Decker brand and the world's leading tape measure manufacturer, found that nearly half of residential trade professionals prioritize having their tape measure over their phone, wallet or keys. In recognition of National Tape Measure Day on July 14, STANLEY's survey uncovered residential pros' tape measure habits and critical design features they look for to get the job done.

"For nearly 100 years, STANLEY has been manufacturing tape measures that trade professionals know they can trust," said Peter Gabriele, Group Product Manager of Measuring & Layout at STANLEY. "We've continued to pioneer the tape measure category and deliver new-to-world technologies that help our users get the job done with the backing of STANLEY performance and accuracy."

Pros Confirm Tape Measures are Higher Priority than their Phone

The STANLEY survey found that 75% of residential pros reach for their tape measure more than five times per day, and 50% admit that daily usage is at least 10 times per day. While the survey found that 42% of residential trade pros chose that they would rather go without their phone, wallet and even keys than be without their tape measure, 44% also noted that they would rather go without their morning coffee than be without their tape measure on the jobsite.

Lost and Found on the Job

Nearly two in three residential pros surveyed reported that they misplace their tape measure at least once per day and 28% say their tape measure goes missing as many as three times per day. Although they may go misplaced, 38% say they own more than three tape measures, likely to help with the misplaced tape measures on the job.

Different Applications Call for Different Tape Measures

When it comes to what they are measuring, residential contractors surveyed say they most often use their tape measure for measuring materials to cut to size (65%), followed by measuring room dimensions (44%) and estimating material needs (38%). To tackle the different needs of a residential jobsite, nearly two-thirds of residential pros say they use different types of tape measures for different jobs. When considering design, residential pros noted the length of the tape measure (71%) and the reach of the tape measure (65%) as the highest priority when selecting a new tape measure.

Tried and True Measurement from STANLEY

STANLEY introduced the first steel tape, known as the Pull-push tape measure, in 1930. The STANLEY Facility in New Britain, Connecticut was home of the original team working with NIST to develop the standards for tape measure quality that are used currently.

Today, different varieties of tape measures are available to meet the varying needs of the jobsite. [STANLEY ControlLock™ Tapes](#) include a finger brake designed for ergonomic control while measuring, while tapes like [STANLEY FATMAX® Tapes](#) include a generous reach for various job uses with some models even incorporating magnets to attach securely to metal studs or other work surfaces. [STANLEY POWERLOCK® Tapes](#) are often the tool people envision when thinking of tape measures – the model has an over 70-year legacy that has withstood the test of time, aiding trade professionals around the world.

Methodology

Survey conducted by [redacted] from July 10-14, 2024. Surveyed 1,000 residential trade professionals.

Stanley Black & Decker commissioned Atomik Research to conduct an online survey of 1,003 contractors throughout the United States. The sample consisted of full-time, part-time and self-employed workers within the construction industry who do residential contracting work. The survey was conducted between June 26 and July 1, 2024. The margin of error for the overall sample is +/- 3 percentage points with a confidence level of 95 percent.
